SBS Seminar Announcement

Believe your results but your interpretation of them is mostly wrong

Anders Vahlne
Karolinska Institutet

Abstract:

My experience from more than 40 years of research is that experimental results are almost always correct, but we as scientists very often make the wrong conclusions from them. I will exemplify this from my own research on a new anti-HIV compound with a new mode of action. The winding and struggling road towards what could be a new anti-HIV drug will be presented. The take-home message is: Trust your results but not your interpretation of them!

Thursday, 08 May 2014 2pm to 3pm SBS Classroom 2 (SBS-01n-22)

Host: Professor James Tam
