From Lab to Market: How to Make Your Research Matter

Temasek Life Sciences Accelerator, the commercialisation arm of Temasek Life Sciences Laboratory is honoured to partner with Entrepreneur First to bring to you a workshop on how to bring your inventions and technologies “From Lab to Market”. TLA General Manager, Dr Muhammad Tani Tabiin will present the new as well as on-going initiatives that TLA has embarked on to commercialise TLL’s technologies. This will be followed by distinguished speakers from Entrepreneur First.

EF helps the world's top researchers turn their research into a business. One example of a company they've helped to build is [Onkolyze](#) — a startup that helps doctors personalise chemotherapy treatment, using computer vision, artificial intelligence, and computer simulations.

This workshop covers three main topics that helps you take your research to market:

1. Finding your Edge and how to leverage it
2. How to ideate and validate
3. How to pitch your ideas effectively

Muhammad Tani Tabiin

Tani has over 25 years' experience in product development and technology commercialisation. While at A*STAR, Tani and his team managed more than 100 Tech development projects worth \$110Mil with an 85% success rate. Spun off more than 30 A*STAR BMS companies and closed more than 300 licenses. Tani then joined a group of scientists from one of the projects that he had managed, developing miRNA based early stage cancer diagnostics, to form MiRXES and served as CBO/COO for almost 4 years before joining TLA.

Tanuja Rajah

Tanuja has a PhD in immunology and now works as a Launch Entrepreneur-in-Residence at Entrepreneur First. This means she personally works very closely with resident founders and teams throughout the programme, helping them find co-founders, ideate, and scale their product in just 6 months. She also has experience building her own startup before this.

Benjamin Reinhardt

Ben is an Entrepreneur-in-Residence at Entrepreneur First where he mentors entrepreneurs through the process of forming teams and building businesses. Previously, he has worked in venture capital and started two companies. He also worked on machine learning and product at Magic Leap, and

did research at NASA. Ben has a PhD in Space Robotics from Cornell, and studied medieval history and aerospace engineering at Caltech.

Entrepreneur First runs a [six-month programme](#) that helps the most talented and ambitious individuals build startups from scratch. The programme has helped build over 140 companies, valued at more than USD\$1.5 billion — including Magic Pony Technology, which was acquired by Twitter for \$150 million. EF as a company is also backed by some of the world's best entrepreneurs, including Reid Hoffman (founder of LinkedIn).
